// WHAT I'VE BUILT
const HomeDepotApplianceExperience = {
  description: 'Team Lead of the company\'s largest product category, namely, Appliances',
  focus: 'Front-End. Back-End when needed. "Scrum Master"',
  achievements: [ 'Led and organized the dev teams involvement in building the June 2019 release
    of the Packages Experience leveraging a new API, backend, frontend, with a scalable design for
    general merch. It exceeded expected growth by 250%, increased AOV and reduced bounce rate',
    'Orchestrated, created, and assigned features to maximize order of execution and team members\'
    abilities to deliver the Package Experience. And now with the current Configurator Experience',
    'Improved ease of local development by creating scripts and setting up mock data servers',
    'Led and initiated the discussions and actions to improve standards and process for repository
    owners for the Product Information Page on .com with an emphasis on updating docs and README' ]
};

const Satellite = {
  description: 'A UI for devs and product managers that displays centralized data around story
    development to track a features progress from pull request through production deployment.',
  focus: 'Full-Stack Creator',
  achievements: [ 'Integrate Slack notifications for when the status of a feature changes',
    'Created a Node server to poll multiple sources, creating a new data set accessible over REST',
    'Include a config service to allow remote updates. i.e. utilize feature switches or include a
    new team to the polling source on request without requiring a deployment' ]
};

const MyOtherApplications = {
  Feature_Switch_Easy: 'Creator | Instead of changing 6 files in the repo, this script lets you add
  a feature switch to the repo in one line in the terminal ensuring contributor consistency.',
  Bair_Data: 'Full-Stack Creator | Developed an easy to use UI that displays ranked eBay sales data,
  utilizing MongoDB and eBay's API, to improve market research for eBay resellers.',
  10-43: 'Creator | Built mobile app allowing searchable work-related data using Parse storage and
  CoreData in Swift.',
  Easy_Budget: 'Creator | Implemented a Parse, cloud based, mobile budget app for simple budget
  keeping using Swift.',
  Price_Compare: 'Creator | Developed a Swift mobile app to keep track of prices across grocery
  stores using CoreData.',
  Concreet_Cal: 'Front-End | Designed intuitive UI for calendar event editing via dynamic React
  modals connecting to Google's calendar API.',
  LifeTime_Capsule: 'Front-End | Implemented AngularJS web app to view and upload multimedia to a
  cloud platform.'
};

// IN THE WORKS
let Poshibly = {
  description: 'A Chrome Extension that automates social actions for professional resellers',
  focus: 'Front-End'
};

// EXPERIENCE
